Write summary for CSS library ???

- **Bootstrap** ⇒ front end framework that helps for both styling & scripting of
  - → we can use both CLJ & CDN and downloadded files of scripting and styling for our designing process.
  - → In command Line Interface we add an online file in our head meanwhile in downloaded compiled css & js file we attached relative address of downloaded file.
  - → We can use bootstrap for both font, text, element, layout & compount style, navbar, icons
  - → Bootstrap support linux, windows, mac, etc. Operating system.

- **Tailwind css :** → Tailwind css is use CLJ & CDN, Vite method for getting style
  - → Tailwind provides components, templates (pre-built), UI kits and community support.
  - → Tailwind provides more flexiability as compared to Bootstrap even both of them are similar
  - → Apart from Bootstrap, Tailwind is styling focused or styling oriented framework

Bulma → Same as tailwind & Bootstrap, But it has multiple options for linking with html page, using css @import, CDN link, NPM import & available git done repository & ~~available~~ avaliable git done

→ Bulma provides tag specific stylings & It is good for beginner level styling & provides more understandable ~~code~~ classes

→ It is a css specific library.

Semantic UI → Semantic UI provides the source code of responsive components in css

→ It contains different elements in unique style like advertisement, popup, search, rating, comment, progress, etc
